

Antigravity CLI Cheatsheet (v1.1)

Overview & Install

Google's terminal AI coding agent — successor to Gemini CLI (shut down 2026-06-18). Command name: **agy**.

Install

- `curl -fsSL https://antigravity.google/cli/install.sh | bash`: macOS/Linux (./local/bin/agy)
- `irm https://antigravity.google/cli/install.ps1 | iex`: Windows
- `agy install`: Configure PATH & shell after install

CLI Commands

- `agy`: Start interactive TUI
- `agy -p "prompt"`: Non-interactive print mode (CI/scripts)
- `agy models`: List supported models
- `agy agents`: List custom agents
- `agy plugin import gemini`: Migrate Gemini CLI extensions
- `agy plugin disable <name>`: Disable a plugin
- `agy changelog`: Release notes

Key Flags

- `--model <slug> / --effort <level>`: Model & reasoning effort
- `--mode default|accept-edits|plan`: Execution mode
- `--agent <name>`: Start with custom agent
- `--project <p> / --new-project <n>`: Project selection
- `--sandbox`: Enable sandboxing
- `--output-format text|json|stream-json`: Structured output
- `--json-schema <schema>`: Validate output schema
- `--disable-slash-commands`: Treat slash input as text

Keyboard Shortcuts

- **Enter**: Submit prompt
- **Shift+Enter** / **Ctrl+J** / **Alt+Enter**: Newline
- **Tab**: Confirm slash-command autofill
- **Shift + Tab**: Cycle execution mode (default → accept-edits → plan)

- **Esc**: Close panels / stop stream / clear empty prompt
- **Ctrl + C**: Cancel agent op (1st), exit CLI (double)
- **f**: Accept/reject individual change in diff preview
- **ctrl+k**: Approve tools instantly
- **?**: Help overview
- Vim mode: `editorMode: "vim"` in settings.json (v1.1.11)

Slash Commands

Conversation

- `/resume (/switch)`: Resume/switch sessions
- `/rewind (/undo)`: Roll back to checkpoint
- `/rename <name>`: Rename conversation
- `/diff`: Interactive diff viewer
- `/tasks`: Monitor/terminate background tasks

Config & Account

- `/permissions`: Autonomy level (request-review / always-proceed / strict)
- `/model`: Select model (persists)
- `/effort`: Reasoning effort level
- `/settings`: Settings panel (+ Agent Mode default)
- `/keybindings`: Shortcut editor
- `/statusline / /title`: Status bar / terminal title
- `/credits`: Remaining AI credits & usage
- `/logout / /exit`: Sign out / quit

Tools

- `/agents`: Agent status panel
- `/mcp`: MCP server management
- `/skills`: Browse local & global workflows
- `/codesearch (/cs)`: Regex code search across workspace
- `/open <path>`: Open file in external editor

Permissions Presets

- **request-review** (default): Diff preview before writes
- **proceed-in-sandbox**: Auto-proceed inside sandbox

- **always-proceed**: No prompts (trusted work-spaces only)
- **strict**: Prompt for all non-read tools

Settings & Paths

- `~/.gemini/antigravity-cli/settings.json`: Main config
- Keys: `altScreenMode`, `editor`, `editorMode`, `notifications`, `showTips`, `runningLightSpeed`
- Fine-grained permissions: allowed/denied command lists in settings.json
- `keybindings.json`: Custom shortcuts (delete to reset)
- `AGY_CLI_CMD_OUTPUT_PERCENTAGE`: Limit TUI command output
- Rules via AGENTS.md / GEMINI.md

Migration from Gemini CLI

- Settings live under `~/.gemini/antigravity-cli/`
- `agy plugin import gemini` migrates extensions
- Legacy `/commands` → convert to **skills**
- Multiple leading slash commands stackable per prompt (v1.1.4)
